Silver Bullet Encryption Tool

The only bullet that survives the hardship

Silver Bullet Encryption Tool is an uncrackable encryption Tool based on one-time pad model

It contains true random number generator which makes data corruptions intentionally with several threads to make true randomness

To use this tool, please execute bullet.py script

If you want to use this tool in other programmes, copy the bullet_parts directory in your programme, import sys and append the directory as an import path, and import primer module.

Thanks.
